

ABSTRACT OF THE DISCLOSURE

A method of arranging a plurality of visual images in an album, based on affective information which classifies such images includes providing affective information to classify at least one digital image from a plurality of
5 stored digital images; using the affective information to determine the importance of the at least one digital image; and producing an album including visual images of the plurality of stored digital images, wherein the importance of the at least one digital image is used to arrange the visual images.
